

ARUN KUMAR V

Senior Full-Stack Developer | .NET Core & Angular

Chennai, India | +91-9943880882 | arunkumarvijay91@gmail.com | [linkedin.com/in/arunkumarv](https://www.linkedin.com/in/arunkumarv)

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with **9+ years** of experience designing, developing, and maintaining enterprise-grade web applications using **ASP.NET Core, .NET 8, C#, Angular, SQL Server, and REST APIs**. Experienced in delivering scalable, secure, and high-performance solutions across the complete software development life cycle. Strong expertise in modern Angular development, authentication and authorization, responsive UI design, Entity Framework Core, and SQL Server. Proven ability to work with cross-functional teams while delivering maintainable, business-focused solutions. Have experience in working under the fast pace, multi-thread and process-oriented environment. Ability to learn fast and work efficiently as an individual as well as in teams.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, HTML5, CSS3

Frontend: Angular 18+, Angular Material, Bootstrap 5, Responsive Web Design

Backend: .NET 8, ASP.NET Core, ASP.NET MVC, Web API, Entity Framework Core, JWT Authentication, API Design

Database: Microsoft SQL Server, MySQL, Stored Procedures, Query Optimization

Testing & Debugging: Manual/Functional Testing, Postman, Debugging, Swagger

Tools: Visual Studio, Visual Studio Code, Git, GitHub, Postman, Swagger, IIS

Practices: Dependency Injection, Repository Pattern, SOLID Principles, Role-Based Access Control (RBAC), Code Reviews, Technical Mentorship

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer | Muthu Technology Solutions Pvt. Ltd. **July 2017 – Present**

Lead developer for enterprise web applications spanning ticketing, POS, user management, workflow automation, and merchandiser management systems, built on **.NET Core and Angular**.

- **Led technical design decisions and mentored 2+ developers** on coding standards, architecture, and best practices, improving team code quality and onboarding speed.
- **Enhanced and maintained 5+ enterprise web applications** using .NET Core, .NET 8, Angular, and SQL Server across retail, workflow automation, and user management domains.
- **Developed and enhanced 20+ business modules**, including Ticketing, POS, User Management, Workflow Automation, Store Visit Tracking, and Reporting.
- **Configured Swagger** for API documentation, request/response validation, and endpoint testing during development.
- **Built secure authentication and Role-Based Access Control (RBAC)** using JWT and ASP.NET Core Identity, improving application security and user access management.
- **Improved responsive Angular applications** with advanced features including search, filtering, pagination, dashboard reporting, file uploads, and Excel export.
- **Integrated and processed Electronic Data Interchange (EDI) transactions (850, 855, 856, and 810)** through ASP.NET Core APIs, ensuring reliable validation, mapping, and seamless data exchange with trading partners.
- **Optimized SQL Server queries** and Entity Framework Core operations, reducing average response times by approximately **25–30%**.
- **Executed manual and functional tests** to validate business logic and reduce regression defects prior to release.
- **Led code reviews as primary reviewer**, providing feedback on maintainability, security, and adherence to SOLID principles.
- **Collaborated with Business Analysts and stakeholders across 5+ projects**, consistently delivering releases on schedule.
- **Deployed and maintained ASP.NET Core and Angular applications** on IIS, including configuration, deployment, and production support.

KEY PROJECTS

Ticketing System — ASP.NET Core, Angular, SQL Server

- Users can create tickets and assign them to team members based on Role-Based Access Control (RBAC), ensuring that only authorized users can access specific features.
- Each ticket follows a defined workflow, with statuses such as Open, Assigned, In Progress, Resolved, and Closed.
- During each stage, users can add comments, upload images or supporting documents, and update the ticket status. The application maintains a complete audit history of all changes for tracking and accountability.
- Search, filter, and prioritize tickets based on status, assignee, priority, or date. Dashboard and reports to monitor ticket trends and team performance.

Background Check System — ASP.NET Core, Angular

- When a merchandiser is onboarded, the system sends their details to Sterling through API integration. Sterling performs the background verification and returns the screening results.
- Based on the response, the application automatically updates the merchandiser's background check status.
- In exceptional business scenarios, authorized users can manually override the status with proper validation and audit logging.
- Role-Based Access Control (RBAC) to ensure only authorized users can perform manual overrides.

Open Store / Area Tracker — ASP.NET Core, Angular, SQL Server

- Field users create store opening requests by entering information such as the retail chain, store details, and opening schedule.
- These openings are then designated to merchandisers based on business rules.
- The application integrates with iCIMS through REST APIs to post newly assigned openings.
- Whenever there are updates, such as changes to store information, assignments, or opening status, the system automatically synchronizes those changes back to iCIMS, ensuring both systems remain consistent.

User Management Automation — ASP.NET Core, Razor Pages, Angular

- User Management Automation application manages the complete lifecycle of user registration and access control. External users can register using email and mobile OTP verification, ensuring secure identity validation.
- Managers and Super Users can create internal users, assign roles, and define permissions for sub-users using Role-Based Access Control (RBAC).
- User profile management, password reset, and account activation/deactivation. Role and permission management with fine-grained access control.
- The system uses JWT-based authentication to secure APIs and provides centralized user administration, profile management, and audit logging.

Point of Sale (POS) — ASP.NET Core, Angular

- Manage billing, inventory, customer data, and reporting through a centralized, user-friendly interface.
- Designed and implemented fast and efficient sales processing using barcode scanning and item lookup. Billing, inventory, reporting, barcode integration.
- Executed secure access control with Role-Based Access Control (RBAC) for cashiers, supervisors, and admins.
- Improved sales reporting features by date, product, category, or employee, including daily summaries and exportable reports for business analysis.

EDUCATION

Master of Engineering, Communication Systems

Rajalakshmi Engineering College, Anna University | 2013-2015

Bachelor of Engineering, Electronics & Communication Engineering

Saveetha Engineering College, Anna University | 2009-2013
